

1. “Scholarly Communication Services by College Library”

Avhad Sharad T.

Librarian, KVNN Naik, Arts, Commerce and Science College Nashik

INTRODUCTION-Library participation in scholarly communication initiatives such as open access to investigate, management of copyright and scholarly publishing improvement has the possible to absolutely impact the worldwide dissemination, detection, and growth of learning. New library like services will be offered by publishers and wholesalers, scholars will enter resources in a straight line into libraries, libraries will carry out publisher like or bookstore like functions.

Scholarly Communication- Recent developments in the scholarly communication ecosystem toward open access (OA) have become highly complex in how researchers discover and use information, create, and select publication venues to disseminate their research. Libraries have a critical role to play in resolving the complexities resulting from the impending 'flip' of journals from subscription to OA. The number of purchased books are decreased from 1986. As tight budgets have led to chronic journal annulment projects at institutions of every size, the circumstances for only one of its kind journal titles is a large amount the same.

In the past ten years, the college library landscape has experienced marked enlargement in the number of institutions that are just beginning scholarly communication programs, services, and positions within their libraries. Libraries and publishers are now engaging in recreation multiple roles. There may be some blurring in the distinctions among the past roles of publishers as producers, vendors as intermediaries, and librarians as archivists. The electronic rebellion may provide the possibility for developing university publishing enterprises through scholarly networks supported also by person institutions or consortia. **(Cummings et al, 1992, xxvii).**

Progressive role of libraries- In academia, the move and alteration in the scholarly communication ecosystem, how faculty researchers create, seek and make a decision on publication venues have been exacerbated by open access options. Faculty researchers usually lack consciousness about the licensing costs of access and different cost models of full OA versus hybrid OA, and welcome librarians to inform about the market situation and the new cost and trade models. The progressive role of the library within the scholarly communication workflow as supplier of scholarly resources seek sensible understanding of the shift toward

open contents in terms of publishers' miscellaneous business strategies in satisfying both the conventional subscription and OA models of publication. It is argued that the library has necessary position in the scholarly communication procedure and in a healthy place to take up the management of book costs in a 'fiduciary role' in managing research publications (**University of California Libraries, 2016**). A number of commercial publishers are starting to pursue a "hybrid" open access strategy where researchers have the option of paying an additional fee to make their articles freely accessible.

Librarians have coined a term for this state of affairs: the serials crisis. Subscription charges have become a black hole into which the library's funds disappear. Unit costs for serials at American Research Libraries (ARL) institutions rose by some 188% percent between 1986 and 2004, and journals now make up over three quarters of the average ARL library's materials funds.
